

## TRANSFORMING THE WAY WE TRANSPORT BEES

For large scale commercial operations like ours, we need options to safely migrate our hives. Chasing great flows while keeping our bees happy and healthy during the long hours on the road is one of the most important and challenging things we do as apiarists. Warral Maldon's innovative custom mesh curtains and pallets in our trucks make our lives as beekeepers and those of our bees much easier. It's a step in the right direction for our industry: let's do it differently.

## IT'S BETTER FOR...

### 1. THE BEES

- They are stress-free and breathe easy
- They maintain connection to the outside and so remain calmer
- Locked in with custom pallet sizes and large gates, with load binders that reduce both movement of the hives and stress for the bees

### 2. THE BEEKEEPERS

- Options are king: creates options for the beekeeper
- A secure load means less concern for bees and hive lids flying off
- A 'shed' on wheels creates a very workable tool for collecting honey supers from hives

### 3. THE BUSINESS

- Manage staff workloads better
- Present to our pollination clients in an orderly, professional manner
- Great biosecurity management tool

## FEATURES AND SPECIFICATIONS OF OUR TWO TRUCKS

### HONEYJOY

- Internal dimensions of body: 7.7m clear side length, 2.1m loading height, 2.4m internal width
- Thermo king TS 300
- Solid curtains, front wall, rear doors and under floor all insulated
- 200lt water tank with micro water sprays, 12volt pump operated from cab or front of body
- Auxilliary garden hose connection to hand water bees
- 'Holman' misting kit fitted under roof within body
- 2 x 150mm vents at front wall, baffled to prevent light entering body
